SPYDER 8 SPYDER 8 SPYDER 8 SPYDER 8

The evolution of slimmer laptops, such as the newer Apples and now being closely followed by HP, Dell and others, has forced the next generation retailers to find a security solution that are better suited to these lighter weight notebooks.
Any merchant knows and understands the importance of appearance in a display. The last thing you want your customer thinking about is having their new purchase stolen.

The **SPYDER 8** is the product you want them to purchase, not your method of security that has your customer's attention. Working with and viewing your product secured in place, using **SPYDER 8** can bring forward a completely different perspective.
Compucage has developed the concept into a practical, durable and effective mode of securing today's smaller laptop computers. As notebook computer sales begin to overtake desktop computer sales, more and more computer manufacturers are offering these smaller machines in an answer to the public's desire for greater portability.

The Compucage **SPYDER 8** is spinning the new web in Computer Security. How?

- Strong and simple design ensures maximum computer protection
- A design that provides a clear unobstructed view
- Coated with a soft vinyl film to protect a computer's outer case
- Extra lightweight for easy portability
- Adequate flexibility to allow a user to feel the weight of a notebook
- Installs in seconds
- For peace of mind while traveling
- Can be used in both open and closed laptop positions
- When locked in the open position, the laptop cannot be closed, thus making it difficult for removal.
- The perfect companion to any laptop
- Last but not least the **SPYDER 8** keeps your laptops secured

The Compucage **SPYDER 8**, which offers the same dependable, rugged security as with all Compucage products, will be commercially available by 2009.
